## **Vision, Mission and Logo**

### **VISION**

To develop young children academically, physically, emotionally with special attention to social and cognitive skills.

### **MISSION**

To provide every child with a national education in partnership with the school, home and religious institutes.

### **LOGO**

“We strive to develop our Children Holistically”

### **What Al-Falaah Educare Offers?**

#### **1. Al-Falaah Educare is a Place of Learning.**

Children learn about Mathematics, Home Language and Life Skills.

We present an Integrated (Eclectic) Approach to the care and education of our young children. We are creating a sense of community within a classroom that in turn provides a sound basis for learning about and developing Academic Skills in Science, Mathematics, Languages and Religious studies. This approach co-incide with the New Curriculum – NELDS (National Early Learning Development Standards.) which is based for the 0 – 5 year old children.

#### **2. How children develop and learn at our Educare?**

In order for us to develop the children holistically, we are creating creative play equipment and materials to stimulate their development and learning.

#### **A Holistic child is developed in the following aspects:**

1. Physical Development. (small and large muscles)
2. Social and Emotional development.
3. Mental and Language Development.
4. Values and Beliefs.
5. Children learn through play:
  - a. Fantasy or make believe play.
  - b. Block Play.
  - c. Educational Play.
  - d. Outdoor Play (includes water and sand play).
  - e. Creative Art.
  - f. Music and Movement.
  - g. Learning with scrap materials.
  - h. Field trips and outings.

**In addition to these activities, we can help parents understand how important it is to encourage and support their children in what they try to do, not only what they can already do successfully.**

**Teachers, parents and adults who help and support the children during their foundation phase years, will be able to respect the elders, the community as well as the environment.**

**We believe through their active involvement within a planned and stimulating environment children will be able to learn a range of skills for coping with life.**

**We want our children to be healthy, safe, happy and have an opportunity to learn.**
